rhinoceros系统 - webservice 接口定义

Revisions:

20160501 zhangbin created

version: 0.2

目录

1.常数定义

1.1 错误代码定义

2.接口定义

- 2.1 <u>用户登入 login</u>
- 2.2 车辆在线状态统计 vechicle_statistics
- 2.3 <u>车辆热区查询 vehicle_hotspots</u>
- 2.4 地理可视区域车辆状态查询 vehicles by geometry rect
- 2.5 车辆名称筛选 vechicle_filter_names
- 2.6 查询指定车辆状态查询 vehicles_status

3. 测试

curl -X PUT/POST/DELETE url

1. 常数定义

1.1 错误代码定义

2. 数据封包

接口调用返回格式:

```
{
    status 状态码 0 : succ; others : error
    errcode 错误码
    errmsg 错误信息
    result 数据内容
}

采用json编码(UTF-8)
```

2. 接口定义

2.1 用户登录

名称:

login(app_key , app_secret , user_id)

描述:

应用系统登录,每当客户登录时到应用系统时,应用系统应向rhino系统进行用户登录注册,并获得访问票据 ticket。

Request

```
URL: /rhino/auth/tickets
Medthod: POST
Headers:
Character Encoding: utf-8
Content-Type: x-www-form-urlencoded
Query Parameters:
    - app_key 应用key
    - app_secret 应用登录密码
    - user_id 应用用户标识
```

Response

```
Headers:
Character Encoding: utf-8
Content-Type: application/json
Data:
  - status 状态码 0 : succ; others : error
  - errcode 错误码
  - errmsg 错误信息
  - result 登录token
```

Examples:

```
Request:
  /rhino/auth/tickets
Response:
  {
    status:0,
    result: oiwurwurioqweuirqwerjqwewriu==
}
```

Remarks

2.2 车辆在线状态统计

名称:

vechicle_statistics()

描述:

获得用户所有在线车辆状态信息

Request

```
URL: /rhino/vehicles/statistics
Medthod: GET
Headers:
Character Encoding: utf-8
Content-Type: x-www-form-urlencoded
Query Parameters:
- ticket : access ticket 登录时获取的票据
```

Response

```
Headers:
Character Encoding: utf-8
Content-Type: application/json
Data: (object)
- running 运行数
- stopped 停止数
- offline 离线数
examples:
```

Examples:

```
Request:
   /rhino/vehicles/statistics/?ticket=12312j%3D
Response:
   {
     status:0,
     result:{
        running: 200,
        stopped: 10,
        offline: 5
     }
}
```

Remarks

2.3 车辆热区

名称:

vehicle_hotspots()

描述:

获取地理可视区域的车辆热点数

Request

URL: /rhino/vehicles/hotspots

Medthod: GET Headers:

Character Encoding: utf-8

Content-Type: multipart/form-data

Query Parameters:

- ticket access ticket
- scale 地图缩放级别 (1-25)
- rect 地图可视区域 x,y,w,h 格式
- limit 返回最大热区数量

Response

Headers:

Character Encoding: utf-8 Content-Type: application/json

Data:(array)

- id 热区编号
- lon 经度
- lat 纬度
- scale 缩放级别
- running 运行数量
- stopped 停止数量
- offline 离线数量

将热区的车辆总数降序输出

```
Request:
  /rhino/vehicles/hotspots/?
ticket=12312j%3D&scale=20&rect=121.101,31.22,2,2.5&limit=20
Response:
  {
    status:0,
    result:[
      {
        id:
               1001,
       lon: 121.22,
       lat:
               31.10,
       scale: 18,
                   200,
        running:
       stopped:
                   10,
       offline:
                   5
     },
   ]
 }
```

2.4 地理可视区域车辆状态查询

名称:

get_vehicles_by_geometry_rect()

描述:

获取地理可视区域的车辆状态列表

Request

```
URL: /rhino/vehicles/geometry
Medthod: GET
Headers:
Character Encoding: utf-8
Content-Type: multipart/form-data
Query Parameters:
  - ticket access ticket
  - scale 地图缩放级别(1-25)
  - rect 地图可视区域 x,y,w,h 格式
  - circle 地图可视区域 x,y,radius 格式
  - limit [可选] 返回最大数量( 0: 所有 )
```

Response

```
Headers:
Character Encoding: utf-8
Content-Type: application/json
Data:(array)
  - id
                  车辆标识(车牌)
  - lon
                  经度
  - lat
                 纬度

    speed

                 速度
  - direction 方向
 - time gps定位时间( timestamp 1970~)
- status 1:在线, 2:停止,3: 离线
- address 地址
- tex+
  - text
                  其他描述
```

```
Request:
  可视矩形区域车辆查询
  /rhino/vehicles/geometry/?
ticket=12312j%3D&scale=20&rect=121.101,31.22,2,2.5&limit=0
  可视圆形区域车辆查询
  /rhino/vehicles/geometry/?
ticket=12312j%3D&scale=20&circle=121.101,31.22,2&limit=0
Response:
 {
    status:0,
    result:[
     {
       id: 贵K56712,
       lon: 121.22,
       lat: 31.10,
       speed: 18,
       direction: 200,
       altitude: 10,
       time: 1493702543
       status: 1
       address: 上海市长宁之路200号
       text: ACC/ON 发动机怠速:2000
     },
   ]
  }
```

2.5 车辆名称筛选

名称:

```
vechicle_filter_names()
```

描述:

获得指定车牌名称列表

Request

```
URL: /rhino/vehicles/names
Medthod: GET
Headers:
Character Encoding: utf-8
Content-Type: x-www-form-urlencoded
Query Parameters:
- ticket: access ticket 登录时获取的票据
- keyword: 车牌关键字
- limit: 返回数量
```

Response

```
Headers:
Character Encoding: utf-8
Content-Type: application/json
Data: (array)
- name 车牌
```

2.6 查询指定车辆状态查询

名称:

get_vehicles_status()

描述:

根据车牌标识查询车辆运行状态信息

Request

URL: /rhino/vehicles

Medthod: GET Headers:

Character Encoding: utf-8

Content-Type: multipart/form-data

Query Parameters:

- ticket access ticket

- ids 车牌列表,多车查询以','分隔

Response

Headers:

Character Encoding: utf-8 Content-Type: application/json

Data:(array)

- id 车辆标识(车牌)

- lon 经度 - lat 纬度 speed 速度 - direction 方向 - altitude 高度

- time gps定位时间(timestamp 1970~)
- status 1:在线, 2:停止,3: 离线
- address 地址

其他描述 - text

```
Request:
  可视矩形区域车辆查询
 /rhino/vehicles/?ticket=12312j%3D&ids=贵K56712,沪A23412
Response:
 {
   status:0,
   result:[
     {
       id: 贵K56712,
       lon: 121.22,
       lat: 31.10,
       speed: 18,
       direction: 200,
       altitude: 10,
       time: 1493702543
       status: 1
       address: 上海市长宁之路200号
       text: ACC/ON 发动机怠速:2000
     },
     . . .
   ]
 }
```
